

GUIDELINES FOR GROUP PROJECT

ASSIGNMENT #2: PROJECT COSTING AND SCHEDULING **Due: 27/09/2024**

Describe the details of the project costing and budget, possibly by the answering the questions below:

1. Provide – if available – the project approved budget with detailed cost breakdown. Present and explain the underlying assumptions and calculation methods. Compare the cost items with the WBS of the project to ensure consistency of project scope and its costing.
2. Present the cost benefit analysis of the project (including cash flow if appropriate) to explain why the project was chosen for implementation.
3. Provide a Gantt chart that describes the scheduling of the project activities. You may have to revise the WBS to ensure that the Gantt chart is consistent with the activities of the WBS.
4. For each activity of this Gantt chart, you may add relevant information of planning as deemed appropriate: expected output (or acceptance criteria), responsibility assignments, budget (if available), and potential problems.
